What is Spray Polyurethane Foam?

Spray Polyurethane Foam (SPF) is a cost effective product and the most efficient insulation on the market. How it works is that when 2 liquid elements blend together they become a solid. When applied to any surface the liquid expands and this substance turns into foam. Polyurethane is as hard as fiberglass but squishy like upholstery foam. Compared to other insulation **Spray Polyurethane Foam (SPF)** offers superior resistance and is an extremely durable material.

A Few Benefits of Spray Foam

- Healthier Living environment
- It cuts your heating and cooling by 50%- 70%
- Used in attics and garages
- Keeps moisture and air seals all area of the structure
- Eliminates insects, rodents and other creatures
- Provides a noise barrier
- Prevents nasty molds to buildup

GO GREEN!

Spray Polyurethane Foam (SPF) Insulation is environmentally friendly. Using this product it reduces green house gasses. It creates a healthy environment for occupants the live or work in these structures. **Spray Polyurethane Foam (SPF)** Insulation is a waterproofing agent and air sealer. When applied to the surface of the area it is the R value per inch that is what seals and secures the area. Using this product we can slow down the process of global warming!
